MISCELLANEOUS: This enzyme is the target of nonsteroidal anti-
inflammatory drugs such as aspirin.
SIMILARITY: Contains 1 EGF-like domain.
SIMILARITY: Belongs to the prostaglandin G/H synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                H2 + A + H(2)O. 10-OCT-2003 (Rel. 42, Last annotation update)

Prostaglandin G/H synthase 2 precursor (EC 1.14.99.1) (Cyclooxygenase 2ynthase 2) (Prostaglandin-endoperoxide synthase 2) (Prostaglandin H2 2ynthase 2) (PGH synthase 2) (PGHS-2) (PGHS-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peroxidase.

MISCELLANEOUS: This enzyme is the target of nonsteroidal anti-
inflammatory drugs such as aspirin.

SIMILARITY: Contains 1 EGF-like domain.

SIMILARITY: Belongs to the prostaglandin G/H synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arachidonate; first step.
SUBUNIT: Homodimer (By similarity).
SUBCELLULAR LOCATION: Membrane-associated. Microsomal
MISCELLANEOUS: This enzyme acts both as a dioxygenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PATHWAY: Prostaglandins and thromboxanes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COFACTOR: Binds 1 heme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         molecule (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plasticity.

                                                                                                arachidonate; first step.
SUBUNIT: Homodimer (By similarity).
SUBCELLILAR LOCATION: Membrane-associated. Microsomal membrane.
TISSUE SPECIFICITY: Expressed throughout the forebrain in discrepopulations of neurons and is enriched in the cortex and hippocampus.
INDUCTION: By cytokines and mitogens.
MISCELLANEOUS: This enzyme acts both as a dioxygenase and as a
MISCELLANBOUS: This enzyme is the target inflammatory drugs such as aspirin. SIMILARITY: Contains 1.EGF-like domain. SIMILARITY: Belongs to the prostaglandin
                                                                 peroxidase.

SUBCELLULAR LOCATION: Membrane-associated. Microsomal
                                                                                                                                                                                                                                     PATHWAY: Prostaglandins and thromboxanes biosynthesis
                                                                                                                                                                                                                                                    H2 + A + H(2)O.
COFACTOR: Binds 1 heme B
molecule (By similarity)
                                                                                                  inflammatory drugs such as aspirin.
SIMILARITY: Contains 1 EGF-like domain.
SIMILARITY: Belongs to the prostaglandin G/H synthase family.
                                                                                                                                                peroxidase.
MISCELLANEOUS: This enzyme is the target

-!- COFACTOR: Binds 1 heme B (iron-protoporphyrin IX) group molecule (By similarity).

-!- PATHWAY: Prostaglandins and thromboxanes biosynthesis farachidonate; first step.

-!- SUBCHLIT: Homodimer.

-!- SUBCELLULAREOUS: This enzyme acts both as a dioxygenase acts both as a dioxygenase.

MISCELLANEOUS: This enzyme is the target of nonsteroidal anti-
inflammatory drugs such as aspirin.

SIMILARITY: Contains 1 EGF-like domain.

SIMILARITY: Belongs to the prostaglandin G/H synthase family.
                                                                                                                                                                                                                                                                                                                                        cells.
CATALYTIC ACTIVITY: Arachidonate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               575

-!- FUNCTION: May play an important role cell proliferation in some normal and cells (By similarity).

-!- CATALYTIC ACTIVITY: Arachidonate + AH + H(2)O.

-!- COFACTOR: Binds 1 heme B (iron-protop molecule (By similarity).

-!- PATHWAY: Prostaglandins and thromboxal
